

# IT Asset Management

Establish greater control and visibility over your asset inventory

## Business Challenges

Lack of a proper Asset Management, leads to limited asset visibility, painful compliance audits and long fulfillment cycle resulting in unnecessary delays and heavy losses. As modern day organizations solely rely on their digital infrastructure for most of their IT operations & services, which majorly run on various IT assets; managing an asset poses a major challenge from a management, cost, and risk perspective.

## Motadata Solution

The IT Asset Management module lets you operate, maintain, deploy, upgrade and dispose of IT assets in a systematic way. Turn IT teams more productive by offering them greater visibility and control over both hardware and software assets, that enables them to fight day-to-day IT issues which helps in minimizing downtime.

Motadata ServiceOps Asset Management is designed to effectively support the associated complexity of managing IT assets and related functions. The platform lets you quickly identify performance bottlenecks, helps in making informed business decisions, monitors hardware & software asset performance and improve service delivery with predefined alert and reporting capabilities.

## Benefits

- Cut down on costs & prevent wastage of IT resources
- Meet compliance requirements
- Mitigate from associated security risks
- Achieve overall optimization with optimum asset utilization
- Better control inventory of ever-growing organization
- Optimize the profit generated by assets throughout their lifecycle
- Allocate Assets and Costs with Asset cost & depreciation information

## Key Features

### Automatic Asset Discovery

Discover, identify, and categorize all ping-able IT assets in or outside a network. Automatically scan and map all IT assets in Windows, Linux, Macintosh and also update them at regular intervals.

### Hardware Inventory Management

Easily discover & search hardware, computer assets in your network to find information like location, client assignment, model, etc. Evaluate their values, and plan purchases with up-to-date information of all assets.

### Powerful CMDB

Maintain a centralized repository to manage & map all IT asset configurations, and track entity & its details for in-depth visibility into how they are connected to each other within the IT infrastructure.

### Purchase & Contract Management

Easily reconcile, access, track, and report purchasing data of assets from a single dashboard. Get notified on contract expiry. Assign IT purchases to individuals or groups for budgeting, reporting, and charge back purposes.

### Seamless Asset Assignment

Easily review asset inventory when a new asset request is received to offer quick service for commonly requested goods and reuse assets that have been returned. Automatically create a PO after necessary approval for requested items that are not in stock.

### Barcode & QR Code Integration

Generate a barcode or QR code for every asset in the CMDB so for users to manage their physical inventory. Simply print and export barcodes/QR codes (PDF). Admins can add their own barcode prefixes.

### Asset Lifecycle Automation

Acquire, configure, manage and deploy IT endpoints to manage inventory intelligently. Keep track of asset's health, predict potential threats & optimize assets for optimum utilization

### Software Asset Management

Manage and optimize the purchase, deployment, maintenance, utilization, and disposal of all software applications and track usage with software metering. Get alert notification on software uninstallation

### Remote Desktop Support

Take control of desktops remotely to troubleshoot or perform modifications, notify the end-users before taking control of their desktop, log reasons for connection, switch quickly between multiple monitors, transfer multiple files, etc.

### Compliance Management

Monitor licenses that are actively being used compared to the licenses actually purchased since a company is exposed to legal risks when it is not aware of the software that is being run on its machines.

### Pre-defined & Customizable Reports

Generate reports as per requirement quickly and easily with pre-defined or customizable report templates with limitless drill-down capabilities to retrieve asset information for various stake holders.

### Integrated with Service Desk

Get full picture of the assets by aligning incidents of the impacted assets through an integrated help desk. Asset association support available on request creation

## Key Features

### Asset Baseline Support

Asset Baseline helps IT managers to define a set of configurations that all instances of a hardware asset type should have to maintain company-wide compliance.

### Asset Movement Support

Allows for the tracking of asset movement, helping IT managers to easily track assets sent out of premise for repair through gate pass and subsequently for replacement.

## Modules

### Asset Management

- Asset Lifecycle Management
- Asset Relationship Mapping
- Barcode Asset Scanner
- IT Asset Discovery
- Software License Management
- Inventory Management
- Automatic Uninstallation of Prohibited Software
