New Features

- ### Create Inventory Report of Monitors in PDF and CSV Format

Now you can generate an inventory report of monitors in your preferred time range. On list page in Monitors menu, an option of 'Export Monitors Inventory' is added. This feature gives you an option to select the date range for report. Report will include all the monitors provisioned in that date range.

- ### Acknowledge Alerts

Now in alert stream you can acknowledge and unacknowledged the live alerts. Also, you can filter the list to see acknowledged alerts, unacknowledged alerts or all alerts.

Feature Enhancement

- ### Motadata to Display Status of Scheduler Jobs

Now Motadata will display the progress and status of scheduler jobs in 'Motadata Health' menu. If the job is in progress, it will show the job as 'In Progress'. If the job is not running, Motadata will display job as 'Available'.

Bug Fixes

- Some monitors in maintenance mode were getting polled from RPE server. Somehow, the status of monitors was automatically getting changed. Now the issue is fixed.

- Motadata was not binding alerts with all monitors when you create monitor alerts. This was happening when you use the filter 'Monitor' without including any IP address.

- Widgets on 'Dashboards' and 'Monitor Templates' were showing 'NA' in some cases. Now the issue is resolved.
